PROFESSIONAL SUMMARY

Detail-oriented Information Technology undergraduate student at UCF (3x Dean's List, 3.7 GPA) with hands-on technical expertise in hypervisor deployment, perimeter firewall administration, zero-trust network architecture, and Linux systems administration. Proven ability to design, build, and secure enterprise-grade infrastructure, including a 20U rack deployment with stateful OPNsense filtering, Suricata intrusion detection, Proxmox VE virtualization, and encrypted mesh overlays. Seeking entry-level full-time roles in Systems Administration, Network Engineering, or IT Operations.

TECHNICAL CORE COMPETENCIES

Networking & Perimeter Security:

OPNsense Firewall, Stateful Packet Inspection (Default Deny), Suricata IDS, Kea DHCP, Unbound DNS, VLAN Isolation, Tailscale Mesh VPN & Tailnet Lock, Caddy Reverse Proxy, Cloudflare DNS-01 ACME TLS, Wireshark Packet Analysis, Bogon Filtering, AdGuard.

Systems & Virtualization:

Proxmox VE 9.x, Debian Linux, Arch Linux / EndeavourOS, Windows 10/11, LXC Containers, Vaultwarden, ZFS Storage Pools & Snapshot Schedules, Samba Shares, Docker.

Hardware & Infrastructure:

20U Server Rack Assembly, 2.5G Multi-Gigabit Managed Switching, 24-Port Patch Panel Cable Routing, 1500VA 900W UPS Battery Backup Deployment, PC Maintenance & Troubleshooting.

EDUCATION

Bachelor of Science in Information Technology

University of Central Florida (UCF)

August 2024 - Expected April 2027

GPA 3.7

CERTIFICATIONS

CompTIA IT Fundamentals (ITF+) Certified.

CompTIA Network+
In Progress

CompTIA Security+ / Linux+ / CCNA
Preparing

TECHNICAL PROJECTS & SYSTEMS EXPERIENCE

20U Enterprise Rack Infrastructure & Edge Firewall:

Personal Lab | July 2026 – Present

- **Rack & Physical Topology:**
Designed and assembled a 20U server rack featuring structured patch panel cable routing, a 5-port 2.5G managed switch, and 1500VA 900W UPS battery backups.
- **Perimeter Security & IDS:**
Deployed OPNsense on a Dell OptiPlex 7070 SFF (dual 2.5G Intel I226-V NICs) isolating the internal 192.168.137.0/24 network behind stateful Default Deny firewall rules and inline Suricata IDS utilizing Hyperscan pattern matching.
- **Core Services & AP Mode Isolation:**
Migrated core network DHCP to Kea DHCP engine, integrated Unbound DNS with AdGuard blocklists, forced port 53 redirects, and reconfigured a Wi-Fi 7 router into AP mode to eliminate double-NAT and rogue DHCP loops.

Proxmox Virtualization & Zero-Trust Storage LXC:

Personal Lab | Jul 2026 – Present

- **Hypervisor & ZFS Storage:**
Configured a Dell Precision 3630 host (32GB RAM, Intel i5-8500) running Proxmox VE 9.x backed by a mirrored 2x 4TB WD Red Plus ZFS pool with automated snapshot schedules.
- **Reverse Proxy & TLS Termination:**
Created segmented Debian LXCs hosting Caddy and Vaultwarden; automated Let's Encrypt TLS certificate provisioning via Cloudflare DNS-01 API challenges, bypassing public port exposure.
- **Zero-Trust Storage & Tailnet Cryptographic Lock:**
Deployed an unprivileged Debian Samba LXC restricted exclusively to point-to-point Tailscale mesh interfaces (100.x.x.x) and deployed Tailnet Lock nodes to enforce cryptographic node authentication and block lateral movement from Tailscale.

Relevant Coursework:

Computer Network Concepts (CNT 3004), Operating Systems, System Administration & Maintenance, Security in Computing, Computer Architecture, Databases, Programming in C, Object-Oriented Programming
