

Isaiah Burke Jones

Orlando, FL | 727.203.2659 | isaiah.burkejones@gmail.com | <https://isaiah-burkejones.github.io/>

PROFESSIONAL SUMMARY

Detail-oriented Information Technology undergraduate student at UCF (3x Dean's List) with hands-on technical expertise in hypervisor deployment, perimeter firewall administration, zero-trust network architecture, and Linux systems administration. Proven ability to design, build, and secure enterprise-grade infrastructure, including a 20U rack deployment with stateful OPNsense filtering, Proxmox VE virtualization, and encrypted mesh overlays. Seeking entry-level full-time roles in Systems Administration, Network Engineering, or IT Operations.

TECHNICAL CORE COMPETENCIES

Networking & Perimeter Security:

OPNsense Firewall, Stateful Packet Inspection (Default Deny), Kea DHCP, DNS, VLAN Isolation, Tailscale Mesh VPN (Zero-Trust Overlay), Wireshark Packet Analysis, Bogon Filtering, AdGuard Adblocker.

Systems & Virtualization:

Proxmox VE (PVE 9.x), Debian Linux, Arch Linux / EndeavourOS, Windows 10/11, LXC Containers, ZFS File Systems & Dataset Mapping.

Hardware & Infrastructure:

20U Server Rack Assembly, 2.5G Multi-Gigabit Managed Switching, Patch Panel Cable Routing, Eaton UPS Battery Backup Deployment, PC Maintenance & Troubleshooting

Scripting & Languages:

Python, Bash Automation, Java, SQL, C.

EDUCATION

Bachelor of Science in Information Technology
University of Central Florida (UCF)
Timeline: August 2024 - Expected April 2027

Honors: 3x Dean's List Student
GPA: 3.7

CERTIFICATIONS & AFFILIATIONS

CompTIA IT Fundamentals (ITF+) Certified.

CompTIA Network+
In Progress

CompTIA Security+ / Linux+
Preparing

TECHNICAL PROJECTS & SYSTEMS EXPERIENCE

20U Enterprise Rack Infrastructure & Edge Firewall:

Personal Lab | July 2026 – Present

- **Rack & Physical Topology:**
Designed and assembled a 20U server rack featuring structured patch panel cable routing, a 5-port 2.5G managed switch, and Eaton Tripp Lite SMART1500LCD UPS battery backups.
- **Perimeter Security Firewall Deployment:**
Deployed OPNsense on a Dell OptiPlex 7070 SFF hardware node using dual 2.5G Intel I226-V NICs to isolate the internal 192.168.1.0/24 network behind stateful Default Deny security rules.
- **Core Services & Wireless Isolation:**
Migrated core network services to Kea DHCP and reconfigured a Wi-Fi 7 router into dedicated Access Point (AP) mode to prevent double-NAT conflicts and rogue DHCP loops.

Proxmox Virtualization & Zero-Trust Storage LXC:

Personal Lab | Jul 2026 – Present

- Configured a Dell Precision 3630 tower (32GB DDR4 RAM, Intel i5-8500) running Proxmox VE 9.x backed by a mirrored 2x 4TB WD Red Plus ZFS storage pool.
- Deployed an unprivileged Debian LXC container hosting Samba, restricting access exclusively to an encrypted Tailscale virtual mesh overlay (100.x.x.x) via application-level hosts allow rules.
- Hardened hypervisor management interfaces (SSH, Proxmox Web UI) through hierarchical firewall rules dropping all unauthenticated local LAN broadcast traffic.

Linux Workstation Administration & Custom Scripting

February 2026 – Present

- Administered Arch Linux and EndeavourOS installations configured with custom bash and Python automation scripts for workspace maintenance, service health checks, and local system backups.

Relevant Coursework:

Computer Network Concepts (CNT 3004), Operating Systems, System Administration & Maintenance, Security in Computing, Computer Architecture, Databases, Programming in C, Object-Oriented Programming
